UGC NET Paper 1st
Unit-2
www.ugc-net.com
UGC NTA NET
Unit-2 Research Aptitude
Research means to search the existing thing 'something' but remains unknown to us. So, Research means to find out something new on the topic that already existed.
It is a searching process for finding new information about the things we already know.
It is a scientific examination for searching for important information on a specific topic.
It can also be referred to as a "voyage of discovery".
So, you can summarize the meaning of research as:
An attitude of inquiry/search/investigation.
A scientific and objective effort made to answer facts,
Hence, requires the application of scientific methods.
Young PV defines it as,
"Research may be defined as the systematic method of discovering new facts or verifying old facts, their sequences, interrelationships, causal explanations and the natural laws which govern them."
Kerlinger defines it as,
"Research is a systematic, controlled, empirical and critical investigation of hypothetical propositions about the presumed relations among natural phenomenon."
John W. Best defines it as,
"Research is the systematic and objective analysis and recording of controlled observations that may leave to development of generalizations, principles or theories result in prediction and possibly ultimate control of events."
Characteristics of Research
Good research follows a systematic approach to capture accurate data. Researchers need to practice ethics and a code of conduct while making observations or drawing conclusions.
The analysis is based on logical reasoning and involves both inductive and deductive methods.
Real-time data and knowledge is derived from actual observations in natural settings.
There is an in-depth analysis of all data collected so that there are no anomalies associated with it.
